PHASE 1 – Brainstorming & Ideation Phase

Cricket Player Performance Tracking Application: CRICKSTATS

Project Title

Cricket Player Performance Tracking Application: CRICKSTATS

Project Overview

CRICKSTATS is a Salesforce-based application designed to capture and analyze match-by-match cricket player performance. The project uses custom objects, relationships, dashboards and automation to organize player statistics.

Problem Statements

- Manual performance tracking is time-consuming.
- Player statistics may be scattered across different records or files.
- Coaches and analysts need a structured way to view performance.
- Generating meaningful summaries manually can take additional effort.

Empathy & User Needs

The ideation phase identifies the needs of players, coaches, analysts and team management for accurate, organized and easily accessible performance information.

Brainstorming

The proposed ideas focus on digital player registration, match-wise performance entry, automated calculations, dashboards and reports.

Selected Idea

A Salesforce-based cricket performance tracking platform, CRICKSTATS, was selected to centralize player and match performance information.

Expected Benefit

The selected idea provides a structured platform for recording performance data and viewing summarized statistics.
