PHASE 2 – Requirement Analysis Phase

Cricket Player Performance Tracking Application: CRICKSTATS

Project Requirements

The requirement analysis defines what CRICKSTATS should do and the qualities it should maintain.

Functional Requirements

- Player Registration – create and maintain player records.
- Match Performance Entry – record match-wise player performance.
- Dashboard Generation – display useful performance summaries.
- Report Creation – generate organized performance reports.
- Flow Automation – automate supported record-processing tasks.

Non-Functional Requirements

- Usability
- Security
- Reliability
- Performance
- Availability
- Scalability

Data Requirements

The system uses player information and match performance information connected through Salesforce object relationships.

Technology Requirements

Salesforce platform, custom objects, custom fields, relationships, reports, dashboards and Flow automation are used for implementation.

User Journey

The customer journey moves from registering a player, entering match performance, processing the information and viewing reports/dashboards.
