PHASE 6 – Project Testing Phase

Cricket Player Performance Tracking Application: CRICKSTATS

Testing Objective

Testing verifies that CRICKSTATS records, calculations, automation, reports and dashboards work according to the defined requirements.

Test Areas

- Player record creation
- Match Performance record creation
- Field validation
- Object relationships
- Roll-up summary calculations
- Flow automation
- Reports
- Dashboards
- Application performance

Functional Testing

Verify that users can create player records and enter match performance information correctly.

Calculation Testing

Verify that roll-up summary values update correctly when related performance records are added or changed.

Automation Testing

Verify that configured Salesforce flows execute the expected actions for the relevant records.

Analytics Testing

Verify that reports and dashboards display the expected performance information.

Testing Outcome

The project document includes testing activities covering record creation, validation, flows, roll-up calculations, reports, dashboards and performance.
