PHASE 7 – Project Documentation Phase

Cricket Player Performance Tracking Application: CRICKSTATS

Documentation Purpose

This phase compiles the project information into a structured final documentation package for submission.

Project Abstract

CRICKSTATS is a Salesforce application for capturing and analyzing cricket player performance on a match-by-match basis.

Core Documentation

- Introduction and project overview
- Problem statement
- Existing/manual approach and limitations
- Proposed solution
- Objectives
- Technologies used
- System requirements
- Architecture and design
- Modules and features
- Database/object design
- Automation
- Testing
- Advantages and disadvantages
- Conclusion
- Future enhancement
- References

Project Advantages

- Centralized performance tracking
- Organized player and match records
- Automated calculations/processes
- Reports and dashboards for analysis
- Reduced manual effort

Project Disadvantages

- The solution depends on the Salesforce environment and configured access.
- Data quality depends on correct record entry.
- Advanced analytics may require additional configuration or integrations.

Conclusion

The project document concludes that CRICKSTATS provides a structured Salesforce-based approach for cricket performance tracking, automation and reporting.

Future Scope

Future enhancement can include richer analytics, additional integrations and expanded performance insights.

Prepared for SmartBridge NM Project – Phase-wise Submission
