PHASE 8 – Project Demonstration Phase

Cricket Player Performance Tracking Application: CRICKSTATS

Demonstration Objective

The project demonstration should show the CRICKSTATS application working from user entry through processing and final output.

Demo Introduction

Start with the project name: Cricket Player Performance Tracking Application – CRICKSTATS.

1. Purpose

Explain that the application is designed to capture and analyze match-by-match cricket player performance.

2. Benefits

Mention organized records, automated processing, reports and dashboards for performance analysis.

3. Execution / Working Process

- Open the Salesforce CRICKSTATS application.
- Show the Player section and player records.
- Create or open a player record.
- Open Match Performance and enter/show match-wise performance.
- Show the relationship between player and performance records.
- Demonstrate roll-up or calculated summary values.
- Show any configured Flow automation.
- Open reports and dashboards.
- Display the final performance output.

4. Final Output

Show the completed player information, match performance records, calculated summaries, reports and dashboards.

Voice-Over Checklist

The demo video should use screen sharing and student voice-over. Clearly explain the project name, purpose, benefits, execution/working process and final output.

Submission Checklist

Upload the demo video to Google Drive and set access to “Anyone with the link can view”. Add the Drive link along with the project submission.

Important Note

This phase is a demonstration guide/script. The actual demo video and Google Drive link must be created and uploaded by the project team.
